TABLE OF CONTENTS

41	Program to write content to a file and display it on the console	115
42	Program to copy one file to another	117
43	Program to reads from a file having integers and copy even and odd number in separate files	120
44	Client server communication using Socket-TCP/IP	122

1. Define a class 'product' with data members pcode, pname and price. Create 3 objects of the class and find the product having the lowest price.

```java
import java.util.*;
public class Product {
    int pcode;
    String pname;
    int price;
    public static void main(String[] args) {
        int smallest;
        Product p1 = new Product();
        Product p2 = new Product();
        Product p3 = new Product();
        p1.pcode=1001;
        p1.pname="RAM";
        p1.price=7000;
        p2.pcode=1002;
        p2.pname="Processor";
        p2.price=37000;
```

6

```java
    p3.pcode=1003;

    p3.pname="SSD";

    p3.price=16700;

    if(p1.price<p2.price) {

     if(p3.price<p1.price) {

        smallest = p3.price;

        System.out.println(p3.pname+ " is the cheapest.");

     } else {

        smallest = p1.price;

        System.out.println(p1.pname+ " is the cheapest.");

     }

   } else {

     if(p2.price<p3.price) {

        smallest = p2.price;

        System.out.println(p2.pname+ " is the cheapest.");

     } else {

        smallest = p3.price;

        System.out.println(p3.pname+ " is the cheapest.");
```

```
    }

  }

  }

 }
```

OUTPUT

```
D:\javalab>javac Product.java

D:\javalab>java Product
RAM is the cheapest.

D:\javalab>
```

2. Read 2 matrices from the console and perform matrix addition.

```
import java.util.*;

class matrixadd{

public static void main(String[] args)

{

int row,col,i,j;

Scanner sc=new Scanner(System.in);

System .out.print("enter the no of rows:");

row=sc.nextInt();

System .out.print("enter the no of columns:");
```

8

```
col=sc.nextInt();

int mat1[][]=new int[row][col];

int mat2[][]=new int[row][col];

int mat3[][]=new int[row][col];

System.out.print("enter the elements of matrix1 :");

for(i=0;i<row;i++)

{

for(j=0;j<col;j++)

{

mat1[i][j]=sc.nextInt();

}

System.out.println();

}

System.out.print("enter the elements of matrix2 :");

for(i=0;i<row;i++)

{

for(j=0;j<col;j++)

{

mat2[i][j]=sc.nextInt();

}
```

9

```java
System.out.println();

}

for(i=0;i<row;i++)

{

for(j=0;j<col;j++)

{

mat3[i][j]=mat1[i][j]+mat2[i][j];

}

}

System.out.print("sum of matrix :");

for(i=0;i<row;i++)

{

for(j=0;j<col;j++)

{

System.out.print(mat3[i][j]+"\t");

}

System.out.println();

}

}

}
```

10

OUTPUT

```
D:\javalab>javac matrixadd.java

D:\javalab>java matrixadd
enter the no of rows:2
enter the no of columns:2
enter the elements of matrix1 :2
4

4

enter the elements of matrix2 :1
2

2
1

sum of matrix :3          6
6        3

D:\javalab>
```

3. Add complex numbers

```
public class Complex{

    double a, b;

    Complex(double r, double i){

     this.a = r;

     this.b = i;

    }

    public static Complex sum(Complex c1, Complex c2)

    {

        Complex temp = new Complex(0, 0);
```

11

```java
        temp.a = c1.a + c2.a;

        temp.b = c1.b+ c2.b;

        return temp;

    }

    public static void main(String args[]) {

    Complex c1 = new Complex(5, 4);

    Complex c2 = new Complex(6, 3.5);

        Complex temp = sum(c1, c2);

        System.out.printf("Sum is: "+ temp.a+" + "+ temp.b +"i");

    }

 }
```
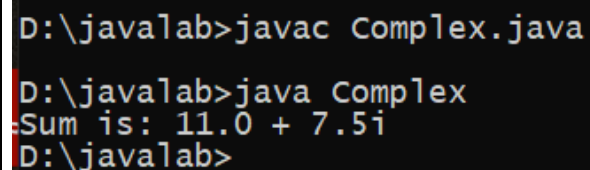

OUTPUT

```
D:\javalab>javac Complex.java

D:\javalab>java Complex
Sum is: 11.0 + 7.5i
D:\javalab>
```

4. Read a matrix from the console and check whether it is symmetric or not.

```java
import java.util.Scanner;

public class Symmetric

{
```

```java
public static void main(String[] args)

{

    Scanner sc = new Scanner(System.in);

    System.out.println("Enter the no. of rows : ");

    int rows = sc.nextInt();

    System.out.println("Enter the no. of columns : ");

    int cols = sc.nextInt();

    int matrix[][] = new int[rows][cols];

    System.out.println("Enter the elements :");

    for (int i = 0; i < rows; i++)

    {

        for (int j = 0; j < cols; j++)

        {

            matrix[i][j] = sc.nextInt();

        }

    }

    System.out.println("Printing the input matrix :");

    for (int i = 0; i < rows; i++)

    {

        for (int j = 0; j < cols; j++)
```

13

```
        {
            System.out.print(matrix[i][j]+"\t");
        }
        System.out.println();
    }
    if(rows != cols)
    {
        System.out.println("The given matrix is not a square matrix, so it can't be symmetric.");
    }
    else
    {
        boolean symmetric = true;
        for (int i = 0; i < rows; i++)
        {   for (int j = 0; j < cols; j++)   {
                if(matrix[i][j] != matrix[j][i])   {
                    symmetric = false;
                    break;        }
            }
}
```

14

```java
        if(symmetric)

        {

            System.out.println("The given matrix is
symmetric...");

        }

        else

        {

            System.out.println("The given matrix is not
symmetric...");

        }

    }   sc.close();

    }

    }
```

OUTPUT

```

```

5.Program to Sort strings

public class sortstring{

public static void main(String[] args)

{

String names[]={"amal","jyothi","college","of","engineering"};

String temp;

int n= names.length;

int i;

int j;

for(i=0;i<n;i++)

{

```
for(j=i+1;j<n;j++)

{

if(names[i].compareTo(names[j])>0)

{

    temp=names[i];

    names[i]=names[j];

    names[j]=temp;

}

}

}

System.out.println("the sorted array of string is :");

for(i=0;i<n;i++)

{

    System.out.println(names[i]);

}

}

}
```

OUTPUT

```
D:\javalab>javac sortstring.java

D:\javalab>java sortstring
the sorted array of string is :
amal
college
engineering
jyothi
of

D:\javalab>
```

6.Search an element in an array.

```java
import java.util.*;

public class searchele{

public static void main(String[] args)

{

int n,i,b,flag=0;

Scanner s=new Scanner(System.in);

System.out.println("enter the number of elements for the array :");

n=s.nextInt();

int a[]=new int[n];

System.out.println("enter the elements of the array :");

for(i=0;i<n;i++)

{
```

18
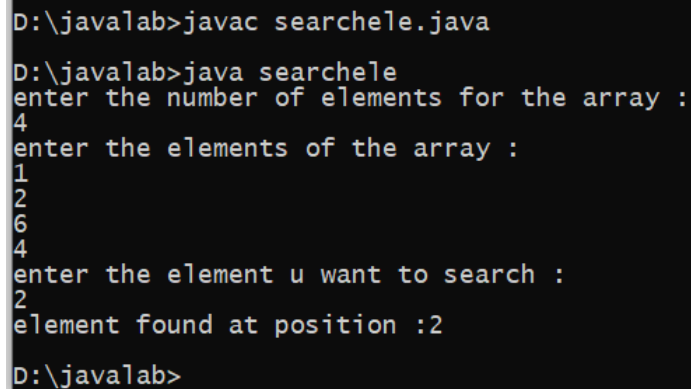

```java
a[i]=s.nextInt();

}

System.out.println("enter the element u want to search :");

b=s.nextInt();

for(i=0;i<n;i++)

{

if(a[i]==b)

{

flag=1;

break;

}

else

{

flag=0;

}

}

if(flag==1)

{

System.out.println("element found at position :"+(i+1));

}
```

19

else

{

System.out.println("element not found");

}

}

}

OUTPUT
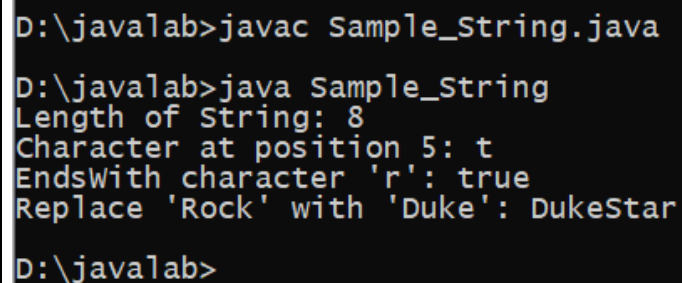

```
D:\javalab>javac searchele.java

D:\javalab>java searchele
enter the number of elements for the array :
4
enter the elements of the array :
1
2
6
4
enter the element u want to search :
2
element found at position :2

D:\javalab>
```

7. Perform string manipulations.

```
public class Sample_String

{

  public static void main(String[] args)

{

  String str_Sample = "RockStar";

  System.out.println("Length of String: " + str_Sample.length());
```

```java
  System.out.println("Character at position 5: " +
str_Sample.charAt(5));

  System.out.println("EndsWith character 'r': " +
  str_Sample.endsWith("r"));

  System.out.println("Replace 'Rock' with 'Duke': " +
str_Sample.replace("Rock", "Duke"));

}

  }
```

OUTPUT

```
D:\javalab>javac Sample_String.java

D:\javalab>java Sample_String
Length of String: 8
Character at position 5: t
EndsWith character 'r': true
Replace 'Rock' with 'Duke': DukeStar

D:\javalab>
```

8. Program to create a class for Employee having attributes eNo, eName eSalary. Read n employ information and Search for an employee given eNo, using the concept of Array of Objects.

```java
import java.util.Scanner;

 public class Employee {

 int empid;

 String name;
```

```java
 float salary;

 public void getInput() {

  Scanner in = new Scanner(System.in);

  System.out.print("Enter the empid :: ");

  empid = in.nextInt();

  System.out.print("Enter the name :: ");

  name = in.next();

  System.out.print("Enter the salary :: ");

  salary = in.nextFloat();

 }

 public void display() {

  System.out.println("Employee id = " + empid);

  System.out.println("Employee name = " + name);

  System.out.println("Employee salary = " + salary);

 }

 public static void main(String[] args) {

  Employee e[] = new Employee[5];

  for(int i=0; i<5; i++) {

   e[i] = new Employee();

   e[i].getInput();
```

```
  }

  System.out.println("**** Data Entered as below ****");

  for(int i=0; i<5; i++) {

   e[i].display();

  }

 }

}
```

OUTPUT

```
D:\javalab>javac Employee.java

```

10.Create a class 'Employee' with data members Empid, Name, Salary, Address and constructors to initialize the data members. Create another class 'Teacher' that inherit the properties of class employee and contain its own data members department, Subjects taught and constructors to initialize these data members and also include display function to display all the data members. Use array of objects to display details of N teachers.

```java
import java.util.*;

class Employee

 {

int empid;

String name,address;

double salary;

public Employee(int empid, String name, String address, double salary) {

this.empid = empid;

this.name = name;

this.address = address;

this.salary = salary;

}

}
```

26

```java
public class Teacher extends Employee

{

String subject,department;

public Teacher(int empid, String name, String address,
double salary,String department,String subject ) {

super(empid, name, address, salary);

this.subject = subject;

this.department = department;

}

void display()

{

System.out.println("Empid    :    "+this.empid+"    Name    :
"+this.name+" Salary : "+this.salary+" Address : "+this.address+"
department : "+this.department+" Subjects : "+this.subject);

}

public static void main(String[] args) {

// TODO Auto-generated method stub

Scanner sc=new Scanner(System.in);

int n;

System.out.println("Enter number of Teachers : ");

n=sc.nextInt();
```

27

```
Teacher obj[]=new Teacher[n];

for(int i=0;i<n;i++) {

int j = i+1;

System.out.print("Enter Empid of teacher "+j+" : ");

int Empid = sc.nextInt();

System.out.print("Enter Name of teacher "+j+" : ");

14.Create an interface having prototypes of functions area() and perimeter(). Create two classes Circle and Rectangle which implements the above interface. Create a menu driven program to find area and perimeter of objects.

import java.util.Scanner;

interface Shape

{

   void input();

   void area();

   void perimeter();

}

class Circle implements Shape

{

```java
    int r = 0;

    double pi = 3.14, ar = 0,per=0;

    public void input()

    {       Scanner s = new Scanner(System.in);

            System.out.print("Enter radius of circle:");

            r= s.nextInt();

    }

    public void area()

    {

      ar = pi * r * r;

      System.out.println("Area of circle:"+ar);

    }

    public void  perimeter()

    {

        per = 2 * pi * r;

        System.out.println("Perimeter of circle:"+per);

    }

}
class Rectangle implements Shape
```
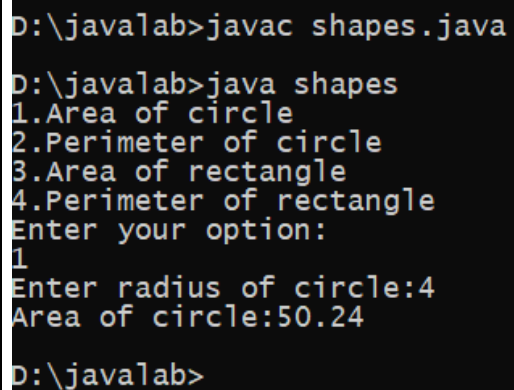

```java
{
    int l = 0, b = 0;
    double ar,per;
    public void input()
    {   Scanner s = new Scanner(System.in);
        System.out.print("Enter length of rectangle:");
        l = s.nextInt();
        System.out.print("Enter breadth of rectangle:");
        b = s.nextInt();    }
    public void area()
    {   ar = l * b;
        System.out.println("Area of rectangle:"+ar);    }
    public void perimeter()
    {    per = 2 * (l + b);
         System.out.println("Perimeter of
rectangle:"+per);  }   }
public class shapes
{
    public static void main(String[] args)
    { int n;
```

```java
Scanner s = new Scanner(System.in);

Rectangle obj1 = new Rectangle();

Circle obj2 = new Circle();

System.out.println("1.Area of circle");

System.out.println("2.Perimeter of circle");

System.out.println("3.Area of rectangle");

System.out.println("4.Perimeter of rectangle");

System.out.println("Enter your option:");

    n= s.nextInt();

switch(n) {

 case 1:

   obj2.input();

   obj2.area();

 break;

 case 2:

   obj2.input();

   obj2.perimeter();

 break;

  case 3:

   obj2.input();
```

43

```
        obj2.area();

    break;

    case 4:

        obj2.input();

        obj2.perimeter();

    break;

    default:

     System.out.println("Invalid option");

}

  }

  }1
```

OUTPUT

```
D:\javalab>javac shapes.java

D:\javalab>java shapes
1.Area of circle
2.Perimeter of circle
3.Area of rectangle
4.Perimeter of rectangle
Enter your option:

```

16.Create a Graphics package that has classes and interfaces for figures Rectangle, Triangle, Square and Circle. Test the package by finding the area of these figures.

```
Package

Graphiccs;

interface

Area1
{
    public void
    Rectangle();
    public void
    Triangle(); public
    void Square();
```

```java
        public void
        Circle(); public
        void getRect();
        public void
        getTri(); public
        void getSqr();
        public void
        getCrl();
}

//shapess.java

package

Graphiccs;

import

java.util.*;

public class shapess implements Area1
{
        double

        lr,lb,ra,th,tb,ta,saa,sa,c,

        cc;

        public void getrect()

        {

                Scanner ab= new
```

```java
        Scanner(System.in);

        System.out.println("Enter the length

        of the rectangle");lr=ab.nextInt();

        System.out.println("Enter the

        breadth of the rectangle");

        lb=ab.nextInt();

    }
    public void rectangle()
    {
        ra=lr*lb;
        System.out.println("Area of Rectangle is "+ra);
    }
    public void getTri()
    {
        Scanner cb= new

        Scanner(System.in);

        System.out.println("Enter the

        height of the Triangle");

        th=cb.nextInt();

        System.out.println("Enter the base
```

49

of the Triangle");tb=cb.nextInt();

}

public void Triangle()

{

    ta=0.5*th*tb;

    System.out.println("Area of Triangle angle is "+ta);

}

public void getSqr()

{

    Scanner sq= new

    Scanner(System.in);

    System.out.println("Enter the

    Side of the Square");

    sa=sq.nextInt();

}

public void Square()

{

    saa=sa*sa;

    System.out.println("Area of Square is "+saa);

}

public void getCrl()

{

```java
        Scanner sc= new

        Scanner(System.in);

        System.out.println("Enter the

        radius of the Circle");

        cc=sc.nextInt();
    }
    public void Circle()
    {

        cr=3.14*cc*cc;

        System.out.println("Area of Square is "+cr);
    }
    public static void main(String[] args)
    {

        shapess o= new

        shapess();

        o.getrect();

        o.rectangle

        ();o.getTri();

        o.Triangle();

        o.getSqr();

        o.Square();
```

51

```
            o.getCrl();

            o.Circle();

        }

 }
```
OUTPUT

17. Create an Arithmetic package that has classes and interfaces for the 4 basic arithmetic operations. Test the package by implementing all operations on two given numbers

```
 package

 Aarithmetic;

 interface operations

 {

      public void

      input(); public

      void add();
```

```java
    public void

    substract();

    public void

    multiply();

    public void

    division();

    }

package

Aarithmetic;

import

java.util.*;

public class basic implements operations

{

    double

    a,b,ad,dif,mult,div;

    public void input()

    {

        Scanner ab=new

        Scanner(System.in);

        System.out.println("Enter
```
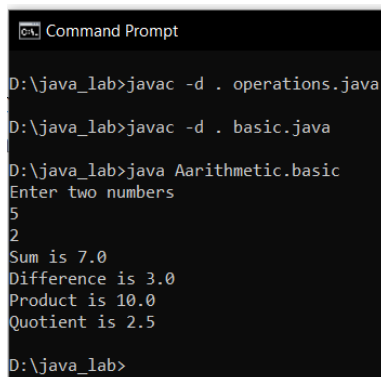

```java
        two numbers");
        a=ab.nextInt();
        b=ab.nextInt();
    }
    public void add()
    {
        ad=a+b;
        System.out.println("Sum is "+ad);
    }
    public void substract()
    {

        dif=a-b;
        System.out.println("Difference is "+dif);
    }
    public void multiply()
    {
        mult=a*b;
        System.out.println("Product is "+mult);
        }
    public void division()
    {
        div=a/b;
```

```
        System.out.println("Quotient is "+div);

    }

    public static void main(String[] args)

    {

        basic o=new

        basic();o.input();

        o.add();

        o.substract(

        );

        o.multiply();

        o.division();

    }

 }
```

OUTPUT

18. Write a user defined exception class to authenticate the user name and password.

```java
import java.util.Scanner;

class UsernameException extends Exception {
 public UsernameException(String msg) {
  super(msg);
 }
}

class PasswordException extends Exception {
 public PasswordException(String msg) {
  super(msg);
 }
}

public class CheckLoginCredential {
 public static void main(String[] args) {
   Scanner s = new Scanner(System.in);
  String username, password;
  System.out.print("Enter username :: ");
  username = s.nextLine();
  System.out.print("Enter password :: ");
  password = s.nextLine();
  int length = username.length();
  try {
   if(length < 6)
```

56

```java
    throw new UsernameException("Username must be greater than 6 characters ???");
  else if(!password.equals("hello"))
    throw new PasswordException("Incorrect password\nType correct password ???");
  else
   System.out.println("Login Successful !!!");
 }
 catch (UsernameException u) {
  u.printStackTrace();
 }
 catch (PasswordException p) {
  p.printStackTrace();
 }
 finally {
  System.out.println("The finally statement is executed");
 }
 }
}
```

OUTPUT

```

```

40.Program to list the sub directories and files in a given directory and also search for a file name.

```
import java.io.File;
import java.util.*;
import java.io.*;
public class p1 {
 public static final String RED="\033[0;31m";
 public static final String RESET="\033[0m";
 static void RecursivePrint(File[] arr, int index, int level,
String search
for) {
 // exit condition
 if (index == arr.length)
 return;
 // space for internbal level
 for (int i = 0; i < level; i++)
```

113

```java
    System.out.print("\t");

  if(arr[index].getName().toLowerCase().contains(searchf
  or))
   System.out.print(RED);
   else
   System.out.print(RESET);
   // for files
   if (arr[index].isFile())
   System.out.println(arr[index].getName());
   else if (arr[index].isDirectory()) {
   System.out.println("[" + arr[index].getName() + "]");
   RecursivePrint(arr[index].listFiles(), 0, level + 1,
  searchfor);
   }
   RecursivePrint(arr, ++index, level, searchfor);
   }
   public static void main(String[] args) {
   Scanner scan = new Scanner(System.in);
   System.out.println("Enter the directory path");
   String maindirpath = scan.nextLine();
   System.out.println("Enter the file/directory name to
  search");
   String searchfor = scan.nextLine();
   File maindir = new File(maindirpath);
   if (maindir.exists() && maindir.isDirectory()) {
   File arr[] = maindir.listFiles();
```

```
        System.out.println("##########################
        #####################
        ###");
         System.out.println("Files from main directory" + maindir);

        System.out.println("##########################
        #####################
        ###");
        RecursivePrint(arr, 0, 0, searchfor.toLowerCase()); //
        array,index
        ,level,search
        }
        }
}
```

OUTPUT

```

41. Write a program to write to a file, then read from the file and display the contents on the console.
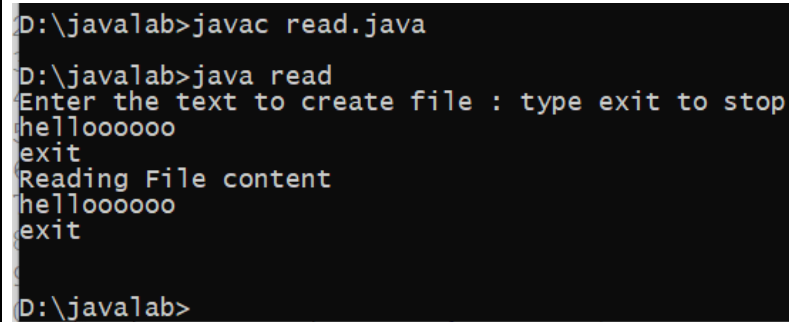

```
        import java.io.FileReader;
        import java.io.FileWriter;
        import java.io.IOException;
```

```java
import java.io.*;
import java.util.*;
import java.io.File;
class read {
 public static void main(String[] args) {
 String var = "";
 Scanner scan = new Scanner(System.in);
 System.out.println("Enter the text to create file : type
exit to stop"
);
 while (!var.endsWith("exit\n"))
 var = var + scan.nextLine()+"\n";
 try {
 File file = new File("output.txt");
 FileWriter fw = new FileWriter(file);
 fw.write(var);
 fw.close();
 System.out.println("Reading File content");
 FileReader fr = new FileReader("output.txt");
 String str = "";
 int i;
 while ((i = fr.read()) != -1) {
 // Storing every character in the string
 str += (char) i;
 }
 System.out.println(str);
 fr.close();
 } catch (IOException e) {
```

```
        System.out.println("There are some exception");
        }
        }
}
```
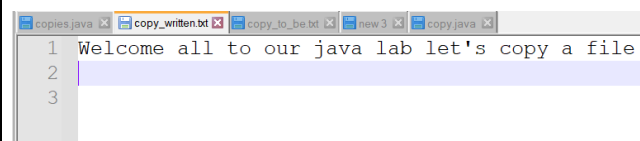

OUTPUT

```
D:\javalab>javac read.java

D:\javalab>java read
Enter the text to create file : type exit to stop
hellooooooo
exit
Reading File content
hellooooooo
exit

D:\javalab>
```

## 42.Write a program to copy one file to another

Pre-requisite

Create a text file with content where the java program is running for reading

```
copies.java    copy_written.txt    copy_to_be.txt    new 3    copy.java
  1    Welcome all to our java lab let's copy a file
  2
  3
```

And have another file to copy

```
copies.java    copy_written.txt    copy_to_be.txt    new 3
  1
```
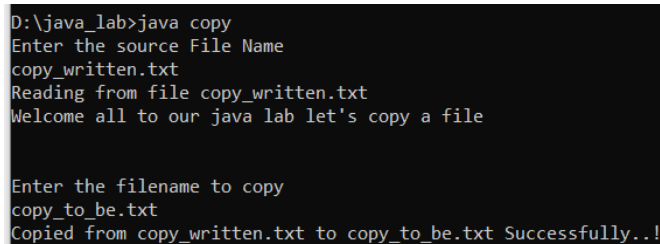

import java.io.FileReader;

import java.io.FileWriter;

import java.io.IOException;

```java
import java.io.*;

import java.util.*;

import java.io.File;

public class copy {

 public static void main(String[] args) {

 Scanner scan=new Scanner(System.in);

 System.out.println("Enter the source File Name");

 String source=scan.nextLine();

 try {

 FileReader fr=new FileReader(source);

 String str = "";

 int i;

 System.out.println("Reading from file "+source);

 while ((i = fr.read()) != -1) {

 // Storing every character in the string

 str += (char) i;

 }

 System.out.println(str);

 System.out.println("\nEnter the filename to copy");

 String destination=scan.nextLine();
```

File file=new File(destination);

FileWriter fw = new FileWriter(file);

fw.write(str);

fr.close();

fw.close();

System.out.println("Copied from "+source+" to "+destination+ " Successfully..!");

} catch (Exception e) {

//TODO: handle exception

System.out.println("Exception Occured");

}

}

}

OUTPUT

```
D:\java_lab>java copy
Enter the source File Name
copy_written.txt
Reading from file copy_written.txt
Welcome all to our java lab let's copy a file

Enter the filename to copy
copy_to_be.txt
Copied from copy_written.txt to copy_to_be.txt Successfully..!
```
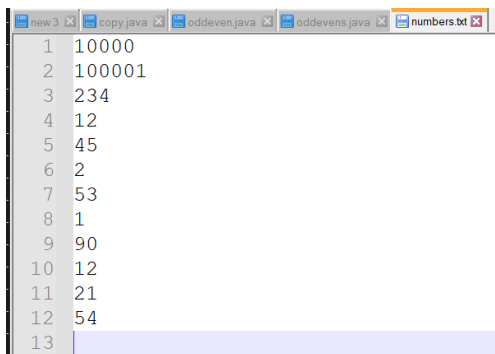

```
copies.java  copy_written.txt  copy_to_be.txt  new 3  copy.java
   1  Welcome all to our java lab let's copy a file
   2
```

43. Write a program that reads from a file having integers. Copy even

numbers and odd numbers to separate files

Pre-requisite

Create a text file with content of numbers where the java program is running for reading numbers

```
new 3   copy.java   oddeven.java   oddevens.java   numbers.txt
  1  10000
  2  100001
  3  234
  4  12
  5  45
  6  2
  7  53
  8  1
  9  90
 10  12
 11  21
 12  54
 13
```

import java.io.FileReader;

import java.io.*;

import ja

public class oddevens {

    public static void main(String[] args) {

    try{

        FileReader fr=new FileReader("number.txt");

   BufferedReader br=new BufferedReader(fr);

        File file1=new File("oddnumbers.txt");
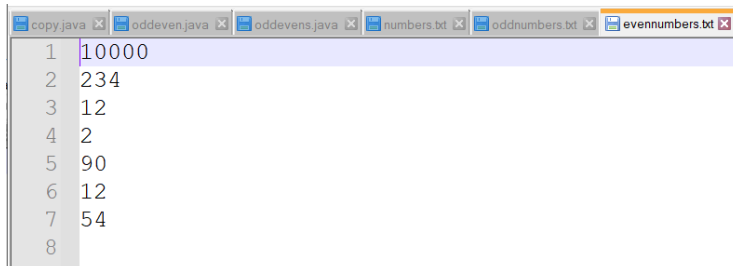

```java
        FileWriter fw1=new FileWriter(file1);

        File file2=new File("evennumbers.txt");

        FileWriter fw2=new FileWriter(file2);

        String num;

    while((num=br.readLine())!=null){

        if(Integer.parseInt(num)%2==0){

            fw2.write(num+"\n");

    } else {

        fw1.write(num+"\n");

    }

}

fw1.close();

    fw2.close();

    }catch(Exception e){

    System.out.println("error");

}

}

}
```

OUTPUT

```
D:\java_lab>javac oddeven.java

D:\java_lab>java oddeven
```

new 3	copy.java	oddeven.java	oddevens.java	numbers.txt	oddnumbers.txt

```
1  100001
2  45
3  53
4  1
5  21
6
```

copy.java	oddeven.java	oddevens.java	numbers.txt	oddnumbers.txt	evennumbers.txt

```
1  10000
2  234
3  12
4  2
5  90
6  12
7  54
8
```

44. Client server communication using Socket – TCP/IP

PROGRAM

Server

import java.io.*;

import java.net.*;

public class MyServer {

public static void main(String[] args) {

try{

ServerSocket ss=new ServerSocket(6666);

Socket s=ss.accept(); //establishes connection

```java
DataInputStream dis=new
DataInputStream(s.getInputStream());

String str=(String)dis.readUTF();

System.out.println("message= "+str);

ss.close();

}catch(Exception e) { System.out.println(e);}

}

}

Client

import java.io.*;

import java.net.*;

public class MyClient {

public static void main(String[] args) {

try{

Socket s=new Socket("localhost",6666);

DataOutputStream dout=new
DataOutputStream(s.getOutputStream());

dout.writeUTF("Hello Server"); // Writes a string to the
underlying output stream using modified UTF-8 encoding
```

dout.flush();

dout.close();

s.close();

}catch(Exception e){System.out.println(e);}

}

}

OUTPUT

```
D:\java_lab>javac MyServer.java

D:\java_lab>java MyServer
message= Hello Server
```

```
D:\java_lab>javac MyClient.java

D:\java_lab>java MyClient
```
